

USING THE PA

1. Turn on the mixing desk and PA speakers using the plug sockets on the wall (turn the mixer on FIRST, THEN the speakers, when switching off, speakers off FIRST, THEN the mixer)

2. Check the lights are on the mixer and PA speakers.

3. Ensure that any channel you wish to use is ON (lit up yellow) using the button above the fader. Make sure that the master fader (red fader on the very right) is also ON and turned up to around 0db.

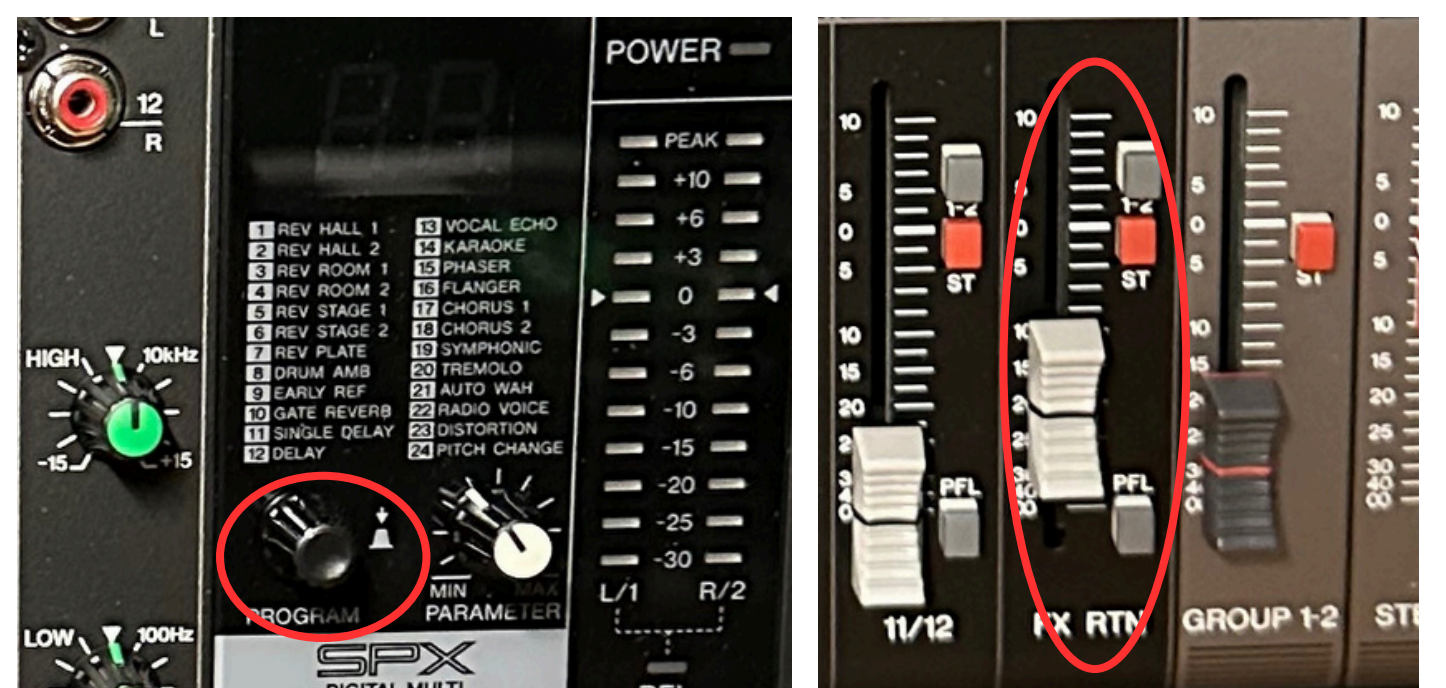

4. Using the faders, set the channel volume to what is required.

5. If more volume is needed, adjust the gain knobs.

6. Reverb is for advanced users, Old School recommends either setting 1 or 3.

- Use the black 'Program' knob to scroll through the type of reverb, press the knob in to select it.
- To control the amount of reverb, use the 'FX' knobs on each channel and also make sure the 'FX RTN' fader is turned up and ON (lit up yellow).

7. When you are finished rehearsing, please turn off ALL plug sockets and remember to switch off the lights. Thank you!
